

Solar Decathlon The 2005 International Competition of Solar Home Design

In 2003 eighteen teams of students accepted an ambitious challenge: to design, build and operate the best solar powered home. Studying at colleges and universities in the United States, Canada, Puerto Rico and Spain, they spent the next two years researching the latest solar energy and energy efficiency technologies, and applying that knowledge to creating world class zero-energy homes. In the fall of 2005 they transported their houses to the National Mall in Washington, D.C., and assembled a solar village as part of an international competition. This ten-part contest determined which house most beautifully and effectively harnessed the power of the sun. Each team was judged on the architectural design of their house, as well as how livable and buildable the house would be. In addition, the teams needed to fulfill the basic functions of a modern home throughout the ten-day contest. Teams were required to produce electricity and hot water from sunlight to cook food, wash clothes, provide hot water for bathing, and run household electronics and refrigerators. The results far surpassed expectations.....
