

Tracking the Elusive Human, Volume 2: An Advanced Guide to the Typological Worlds of C. G. Jung, W.H. Sheldon, Their Integration, and the Biochemical Typology of the Future

Tracking the Elusive Human, Volume I stressed the practical character of type recognition and development, which provides the indispensable foundation for this volume. Here in Tracking the Elusive Human, Volume II we are going to explore Part I: The history and development of Jung's psychological types Part II: Sheldon's life and work, and the controversies that surrounded them Part III: The integration of Jung's and Sheldon's typologies Part IV: The frontiers of typology where it meets new developments in biochemistry and genetics. It would be soothing to think of the journey that lies ahead of us as a leisurely stroll through the world of typology. But our journey is, unfortunately, a much more rigorous one because of the difficulty of the terrain, and its vast extent. Without making any pretense at being exhaustive, we are going to examine a considerable amount of the literature that has grown up around the typologies of Jung and Sheldon in order to try to capture their fundamental principles, bring them together in an integrated typology, and glimpse what new dimensions the future might add to them. And this will not be an easy task. Each of these typologies culminates a long historical tradition, represents an important advance over what went before, and together they present us with the possibility of forging a superb instrument for the understanding of human differences.
